COMMUNITY ENGAGEMENT & RESEARCH

Programs, Resources and Services
ucdenver.edu/research/CCTSICommunity-engagement
Community Engagement

The CCTSI is a collaborative enterprise between University of Colorado Denver, University of Colorado Boulder, Colorado State University, six affiliated hospitals and health care organizations, and multiple community organizations with a goal to accelerate the translation of research discoveries into improved patient care and public health. The CCTSI was created in 2008 with funding from the Clinical and Translational Science Award (CTSA) initiative of the National Institutes of Health (NIH).

The Partnership of Academicians and Communities for Translation (PACT) is the nexus of the CCTSI Community Engagement and Research (CE&R) Core, facilitating practice-based and community-based participatory research (CBPR), educating and connecting investigators and communities, developing programs to create and improve relationships and build trust between academicians and communities, and making pilot grant funds available for community engaged research. The PACT encompasses more than 20 Colorado communities, 940 physician practices, 28 hospitals, eight focus communities, eight Community Research Liaisons who are embedded in the focus communities, community engagement pilot grant awardees, faculty and staff participants from the Colorado Immersion Training in Community Engagement (CIT) program, and a group of core staff dedicated to supporting the PACT and Community Engagement. The PACT brings these partnerships into a sustainable and collaborative group for bidirectional exchange, encouraging public trust in the research enterprise while investing in targeted community translational research initiatives.

The PACT is operationalized through relationships and strategies that are imagined, implemented, tested, and deployed through the leadership and governance of the PACT Council. This Council is a balanced governance structure comprised of equal numbers of community and academic experts who have equal influence over decisions. The Council oversees statewide initiatives, functioning very much as a non-profit board of directors.

PACT COUNCIL GUIDING PRINCIPLES

1. PACT is guided by agreed upon principles with the ultimate goal of reducing health disparities in Colorado and the Rocky Mountain Region.

2. Community translation includes bi-directional exchanges of ideas and information through equal research partnerships and mutual respect between communities and researchers.

3. The work of the PACT will build on current health and social science research and best practice.

4. There are new discoveries to be made and best practices to be developed in translation and community based participatory research.

5. The diversity of individuals and of our communities is our strength and should be leveraged to increase health equity and reduce health disparities.
Mission

The Partnership of Academicians and Communities for Translation (PACT) transforms health research to balance power and responsibility between community, clinicians, and researchers to improve the health of the people of Colorado and the Rocky Mountain Region.

Overarching Goal

To reduce health disparities in Colorado and the region through targeted investments in community translational research initiatives and dissemination of evidence-based practices.

Specific Aims

All of the CE Core’s projects, programs and resources are designed to achieve our mission through addressing the following aims:

1. Convene strategic community-academic partnerships as a sustained enterprise for community-based translational research that encourages trust in the research enterprise and addresses health concerns of relevance to communities in Colorado and the surrounding area.

2. Build the capacity of Colorado researchers, community organizations and practices to conduct mutually beneficial, community-engaged research.

3. Infuse community engagement throughout the translational research spectrum, strengthening the bidirectional links between the academic medical center, healthcare providers, and community.

4. Facilitate the translation and dissemination of scientific discoveries into practical, community-relevant language and interventions.
Partners and Programs

Community Research Liaisons
As part of the CE&R Core, the PACT Council directs resources to a team of Community Research Liaisons (CRLs) working in diverse urban and rural communities throughout the state. The liaisons build bridges between health research, clinical practice and community health initiatives while educating others about the purpose and value of equitable and participatory research partnerships. Liaisons live and/or work in the communities they serve and have an insider’s understanding of their community’s assets and challenges. Ultimately, the nature of their work stems from the community’s needs. CRLs act as “guardians” in their respective communities (and/or allies in other communities) where they strive to establish and maintain the trust with communities by advancing community relevant and mutually beneficial research partnerships and discouraging research that neglects the community’s best interests. There is considerable trust between a liaison and his/her community, which allows access to local residents and leaders on a more meaningful level.

CRLs comprise a critical workforce for the PACT and the communities they represent and, as such, are an extension of the PACT. As a group, the CRLs’ work spans a range of activities. Activities may change over time and include PACT-directed activities, staff activities, community activities, and activities CRLs may do specifically for their home or affiliated organization. CRLs maintain ongoing relationships and relevant contact with organizations and entities that may benefit from or may be a benefit to CE&R activities. Activities may change from time to time to accommodate requirements of grants and other sponsored projects. Not all CRLs must participate in every program or activity.

Funding for the CRL position is provided by the CCTSI, approved through the PACT and administered by Community Engagement Staff in partnership with the Trailhead Institute. There are four categories of CRLs:

1. University/Community-based: These liaisons are employed by the University but housed within a community organization. They are also seen in community as guardians or community representatives.
2. University-based: Employed by the University (though not necessarily housed at the University) and heavily involved in their respective communities. University-based liaisons are paid through the University.
3. Community-based: Community-based Liaisons are paid through Trailhead. Funding for Community-based CRLs is paid to the CRLs’ home organization or directly to the CRL if he/she operates as an independent contractor.
4. Affiliate-based: Affiliate-based Liaisons are employed by organizations that are subcontracted under the University’s Main CCTSI grant. They are paid through their home organization.
Trailhead Institute
While academic-community partnerships offer new opportunities for generating and exchanging knowledge and performing research, they also raise new social, ethical and administrative challenges. The CE&R Program has developed a unique solution to these obstacles, involving an innovative partnership with the Trailhead Institute. We have established administrative systems that allow meaningful community representation and participation in the research enterprise while eliminating the previously perceived “red tape” that often accompanies contractual relationships in an institutional bureaucracy such as the University. Trailhead serves as an administrative liaison between the University and Community to create efficiencies in the distribution of funding and other resources to community-based partners and to improve responsiveness to community administrative needs.

The State Networks of Colorado Ambulatory Practices & Partners (SNOCAP)
SNOCAP is an umbrella network of Practice Based Research Networks (PBRNs) affiliated with the University of Colorado Denver. The Adult and Child Center for Research on Delivery Systems (ACCORDS) and the Department of Family Medicine provide central support for the consortium. SNOCAP member networks are housed within the Department of Family Medicine and the Division of General Pediatrics. SNOCAP member networks collaborate on projects and studies, share resources, and jointly sponsor an annual meeting of member practices and clinicians. SNOCAP works closely with practices across the state to develop and answer research questions that are relevant to primary care clinicians in the communities across the entire state.

Colorado Immersion Training in Community Engagement

Community Immersion Training

Frequency: Annual, one cohort per track
Description: The Community Immersion Training (CIT) is a unique community-campus educational initiative that aims to introduce an expanded pool of researchers to community-based participatory research (CBPR) and community engagement. CIT supports a change in the research trajectory of academic health researchers, program developers, and graduate students towards community engagement. The program occurs on campus and in six community settings: urban African American, urban Asian Refugee, urban Latino, urban American Indian/Alaska Native, rural northeast Colorado, and rural San Luis Valley. Components include a four-week Directed Reading, Seminar on CBPR, four-day immersion experience in the target community, structured mentoring, and follow-up.

Immersion Field Experience

Frequency: Annually, one cohort per track
Description: One-day and Customized Immersions occur in both community and campus locations with community and academic partners. These individualized immersion experiences are developed in partnership with a CCTSI Community Research Liaison on an as-needed basis.

Pilot Grant Program: Improving Research Through Community-Academic Partnerships

Frequency: Two cohorts per year (one partnership development; one joint pilot)
Description: One of the CE Core’s key functions is to build capacity in community-academic partnerships in order to transform the existing community research infrastructure using community-based participatory research (CBPR) principles to translate established efficacy into effective implementation at the community or clinic level. The CE Core Pilot Grant Program is intended to support community-academic partnerships to perform pilot studies that will strengthen relationships and produce preliminary data for future competitive grant applications. Funded projects encompass partnership development, project planning, capacity building (i.e., data collection and management, recruitment and outreach, etc.) as well as implementation of research projects within specified areas of emphasis (cardiovascular disease, childhood chronic conditions, social emotional health). The development of innovative interventions or the adaptation and implementation of existing advances within the community setting is the expected long-term outcome.
Technical Assistance and Coaching for Pilot Awardees

Let’s Get Started and Let’s Keep it Going Trainings: Introduction to Community-Engaged Research (CEnR) is designed for new or emerging community-academic research partnerships and provides an overview of CEnR principles and methods. This training is required for all CCTSI CE pilot grantees and is intended to provide a common frame of reference for their research partnership. Following the training, grantees receive an additional four hours of one-on-one coaching from a Community Research Liaison or other community engagement experts.

Community Engagement Consults
Frequency: Ongoing, continuous
Description: Consultation services for academic researchers and study team members regarding ethical issues that arise in preparation for and/or in the process of doing research with and in community. Community Engagement Consults are intended to supplement the traditional Institutional Review Board approval process, especially when concerns regarding working in partnership with communities arise.
There are three types of consultation services offered through the CCTSI Community Consults and Ethics Committee (CCEC):
1. Consultation regarding a Plan for Community Consultation, as required by the COMIRB Policies and Procedures for the Protection of Human Subjects section 22.7.3.2 – Documents for Approval of the Emergency Research Exception from Informed Consent. This policy states that “Before the community engagement plan is submitted to the IRB for review and approval it must first be reviewed and approved by the UCD Community Advisory Committee [the CCTSI Community Consult and Ethics Committee] which is a subcommittee of the PACT Council for the CCTSI.”
2. Community Engagement Consult with the CCEC and relevant community and/or academic experts.
3. Individual consultations on community engagement in research activities with members of the PACT Council, CE&R Staff and/or Community Research Liaisons.

Research Readiness
Frequency: Ongoing, under development
Description: The CE&R Core, over the last decade has developed a series of trainings, educational activities and funding opportunities to build capacity in community-academic research partnerships. These trainings are now being combined into a comprehensive “Research Readiness” training program to equip CBOs with the knowledge and tools to design their own organizational strategies and policies related to research and to effectively and equitably partner with researchers in all phases of the research process. In the spring of 2018, the CE&R Core completed more than 20 key informant interviews with academic investigators and CBOs to assess the need and potential value of formal “Research Readiness” training for CBOs. The interviews revealed that academic researchers are enthusiastic about the possibility of being able to access a network of formally trained CBOs that are ready and willing to partner on research projects. CBOs expressed a desire to establish a more strategic, intentional and informed approach to participating as full partners, or even as leaders, in research efforts that align with their organizational priorities, as opposed to participating in one-off projects in which they are primarily engaged in data collection or participant recruitment, but excluded from the rest of the research process. Research Readiness for CBOs goes beyond research fundamentals. It also encompasses the principals of Community Based Participatory Research (CBPR), partnership development, trust, equity, data use and ownership, and the development of organizational plans, policies and procedures to guide strategic research efforts. Development and formalization of the Research Readiness program is ongoing.

Community Engagement Seminars and Workshops
Frequency: Ongoing, upon request
Description: The CE&R Core develops education and training programs for multiple different audiences. Education and training activities include: the Research through Community-Academic Partnerships seminar series highlighting lessons learned through real community-academic partnerships. The series was video-recorded and is posted on the CCTSI Community Engagement website under the Resources section. In 2015, the CE&R core partnered with Kaiser Permanente’s Arts Integrated Resource
to implement the first Beyond the Publishable Paper (BPP) workshop. BPP was designed to give researchers and community members new tools for disseminating research information and data. Finally, the CE&R core designs and implements tailored training activities for various conferences and community or academic partners.

**Research Exchange and Networking Forum**
**Frequency:** Annual  
**Description:** The annual Research Exchange and Networking Forum is an event, hosted in either a community or academic setting, which is designed to: share information about flourishing partnerships between community-based organizations and academic researchers from across the state; provide a platform to learn about programs designed to improve relationships and build trust between academicians and communities and how you can get involved; and showcase work in translational and community-engaged research through a poster session.

**Boot Camp Translation Facilitation and Training**
**Frequency:** Ongoing, upon request  
**Description:** Boot Camp Translation alters the conceptual framework that patients and community members hold for medical conditions and prevention they consider high priorities for themselves and their community. Through a bidirectional process, communities choose the health conditions that are locally and culturally relevant and work with the Community Engagement Core and other topical experts to identify the best evidence for addressing the locally chosen health topic. By engaging the community in this process it is assured of local and cultural relevance and increases the chance of uptake and implementation. The CE Core works closely with the University of Colorado Department of Family Medicine to facilitate BCT’s across the country and to train others to facilitate their own BCT’s.

**Data Sharing Guidelines: In Support of Community-Academic Partnerships**
**Frequency:** Ongoing, upon request  
**Description:** Data Sharing Guidelines for Community Academic Partnerships is a resource that was developed in response to an identified need for more developed guidelines for data sharing in community-academic partnerships. This resource is intended as a guide to facilitate decision making concerning data sharing agreements between community and academic partners; it is not meant to be comprehensive, nor directive. The full document can be found online. It contains:
- Best practices on data sharing, data management plans, and data sharing agreements
- A step by step process for the creation of a data sharing agreement
- Recommendations for what to include in a data sharing agreement
- Information about the creation and support of effective community-academic partnerships – including building trust
- An annotated bibliography of key resources for the support of data sharing in community-academic partnerships
